Analysis of the Affecting Factors in Vulnerability of Rural Housing to Earthquake Disaster (Case study: Sjasroud County - Khodabandeh Township Zanjan Province)

Date received: 27 december 2012

Date accepted: 23 June 2013

Abstract

Housing as a major structural part of the settlement, having major role in the formation of spatial structure and identity of rural architecture, and The most important measure of housing satisfaction can be summed up in its strength. With respect to the unstable in geographical conditions in relation to earthquake as a natural disaster in Iran, and thanks to it's non-compliance with technical standards in the construction, the use of traditional and non-resistant building materials and housing was worn, leading to greater vulnerability of rural settlements to earthquake disaster. The aim of this study was to investigate the situation and determine the vulnerability of rural housing in
