The Evaluation of the Residents Sense of Attachment to Place in the New Towns (Case Study: Hashtgerd New Town)

Date received: 11 October 2012

Date accepted: 12 August 2013

Abstract

One of the important and effective means in the upgrade of quality of the human environment is the sense of place. The sense that is regarded as the formation foundation of communication of users and the environment, which finally leads to the creation of quality environments. The research has been carried out with 379 samples, and the aim was the evaluation of sense of belonging to place of Hashtgerd new town inhabitants. The research method was descriptive–analytical. The data obtained through the questionnaires have been described and analyzed by using SPSS software and applying statistical methods including frequency distribution, ANOVA test, Spearman correlation coefficient and Pearson, and regression analysis. The test results showed that there was a significant relationship between four variables of the period of
